EDUCATION

Messiah University — Mechanicsburg, PA

Expected Graduation: 2027

Bachelor of Science, Mechanical Engineering | GPA: 3.0

- Dean's List; Dean's Scholarship; Provost's Scholarship
- Varsity Intercollegiate Athlete — Wrestling
- Independent Research Project: designed a complete CAD module for a cashew-shelling device for a client in Senegal, translating field requirements into manufacturable design.

TECHNICAL SKILLS

CAD/Design: SolidWorks, mechanical design, design for manufacturability

Analysis: MATLAB, stress analysis, statics/dynamics, thermodynamics, fluid mechanics

Manufacturing/Testing: Fabrication, prototyping, mechanical testing, instrumentation

Additional: Arduino/embedded systems, process/operations planning

ENGINEERING PROJECTS

Wind Turbine Team

Junior Year

- Designed and built on-site and off-site wind-turbine test stands for system testing and performance evaluation.
- Performed stress calculations and structural analysis to validate test-stand components and support design decisions.
- Modeled test-stand components and assemblies in SolidWorks, then fabricated and assembled the physical test stands.
- Participated in system testing and troubleshooting of the mechanical and electrical wind-turbine system.

Manual Washing Machine Team

Senior Year – Current

- Leading mechanical design of a manually powered washing machine for refugee communities, developing the system from concept through CAD, engineering analysis, fabrication, and testing.
- Designing the drum, shaft, bearing supports, structural frame, seals, and hand-drive components in SolidWorks, evaluating loading, strength, vibration, manufacturability, and cost.
- Designing for field deployment in Greece with emphasis on durability, maintainability, locally sourced components, and a constrained project budget.

EXPERIENCE

Cav Movers — Charlottesville, VA

2021 – 2026

Operations Manager (2024 – 2026)

- Served as on-site field manager for a multi-crew operation — planning schedules, selecting compatible teams, and allocating equipment and vehicles across concurrent projects.
- Managed over 100 successful projects end-to-end, from first customer contact and estimating through execution and quality follow-up.
- Made high-pressure, time-constrained decisions and managed operational risk daily, maintaining full accountability for outcomes.

Moving Operations SaaS Platform — Remote

2026 – Present

Founder & Developer

- Designed and built a full-stack SaaS platform integrating sales, scheduling, workforce management, payroll, payments, and operational documentation for moving companies, currently piloting with 2 companies.
- Designed a multi-tenant PostgreSQL data model with role-based access, automated workflows, API integrations, and cloud deployment using Next.js, TypeScript, Prisma, Neon, and Vercel.
- Developed automation connecting lead intake, quoting, booking, crew scheduling, and payroll, reducing repetitive administrative work and improving operational scalability.
- Applied engineering and process-optimization principles to real business operations, supporting crew expansion from 3 to 5 employees and approximately 50% revenue growth over a 2–3 month pilot period.
